

# DOCKSIDE™ PREFILTER

*The perfect start for better on-board drinking water quality*

*The first step in ensuring safer water quality is the Dockside Prefilter from General Ecology, Inc. For use with General Ecology® purifiers for a complete on-board water system.*

## FEATURES and BENEFITS

- Exceptional removal capacity
- Effective and dependable
- Quick and easy installation
- Self-centering
- Double O-ring bypass prevention
- Low pressure loss
- Eliminates channeling bypass

**AS9100, ISO 9001 and FAA Quality Certified  
Original Equipment and PMA Manufacturer**

Distributed by:

The Dockside™ Prefilter System prefilters fresh water you might use from dock side or marina sources while you cruise. The Dockside Prefilter extends the life of Seagull®IV Purification System you have installed on board and helps keep equipment running smoothly by filtering out many of the most troublesome contaminants. Designed to remove abrasive sand, dirt, rust and suspended particulates, the Dockside Prefilter is sure to suit your fresh water needs.

The Aqua-Polish® Filtration Cartridge used in the Dockside Prefilter has a nominal three (3) micron retention, enabling it to reduce chlorine, microscopic and visible dirt and scale, and many other larger particle contaminants. Dockside Prefilter is a filtering device, not intended to remove microbiological contaminants.

For purification of water, use in tandem with a Seagull®IV Water Purifier for a complete on-board system. Independently certified to EPA Guide Standard Protocol, (Seagull IV water purifiers remove many chemical, aesthetic and microbiological contaminants including Viruses, Bacteria and Cysts)!

## AQUA-POLISH SPECIFICATIONS

Minimum Temperature**	33° F (0.5° C)
Maximum Temperature**	100° F (38° C)
Flow Rate	5 gpm
Capacity*, Avg.	4,000 gallons
Working Pressure	10 psi
Particle Retention (nominal)	3 microns

\* capacities will vary depending on influent water quality.

\*\* Intended for COLD WATER USE.

Does not desalinate. For RV/Marine use.

General Ecology, Inc. recommends a chlorine residual be maintained in your fresh water tank. For additional information ask us for the "Potable Water Tank Memo".
